---

Hi folks,

Thanks for bearing with me and the Teams environment for this afternoon's check-in meeting.

- We discussed the scoping results and areas where public comments were focused. All substantive comments are included in the summary document.
- (b)(5)
- Beth will follow up with Jon K, Garry, Jason W and Jason G on sediment analysis requirements/methods.
- Tory will follow up with permittees for a field trip.
- Beth will follow up with JD on his earlier statements about ashy soils.
- I shared a draft timeline and how summer analysis and writing is never a great thing. I'll work on this some more and run by folks and Slater considering the other ongoing projects and implementation work.
- Please read the proposed action and let Jim know if you have any questions or need more information. (Box\1900 Planning - Ochoco\Ochoco Project\LOM\EA\LOM~ea2021LemonGulchComplexTrails\! NEPA\Proposed Action). In the same folder, use the ResourceProtectionMeasures document to begin amassing your project design features.
- *Please identify any particular areas of the project that you would like to see and discuss with the team on May 27<sup>th</sup> or a future TBD field trip.*

---

Just to recap our meeting today with the intent of looking at potential alternatives to the proposed action as directed by Slater. Present: Jim B., Slater, Andrew, Beth. (please let me know if a correction is necessary)

- (b)(5)
  -
- Beth will create a map showing the trails by priority and zone.
  - Beth will work with Tory to get a field trip planned with core IDT and permittees.
  - The project is intended to be implemented in phases, which will be described in an implementation plan in an appendix to the EA.
  - If we determine that any monitoring is necessary, we need to be specific about what and why and it has to be realistic. It may be that some monitoring of the system as it gets built out will help us adapt from one phase to another, but it doesn't have to be rocket science and we shouldn't expect a bunch of funding.
